

HealthForecast AI — Treatment Analysis Report

Generated: 2026-08-15 06:18

Dataset: Diabetes 130-US Hospitals | Encounters: 101766 | Early readmission definition: readmitted == '<30'

Medication-use association summary

Treatment	Encounters	Early readmissions	Rate
insulin	54383	6601	12.14%
metformin	19988	1939	9.7%
glipizide	12686	1452	11.45%
glyburide	10650	1132	10.63%
pioglitazone	7328	774	10.56%
rosiglitazone	6365	665	10.45%
glimepiride	5191	530	10.21%
repaglinide	1539	205	13.32%
glyburide-metformin	706	78	11.05%
nateglinide	703	80	11.38%
acarbose	308	28	9.09%
chlorpropamide	86	5	5.81%
tolazamide	39	3	7.69%
miglitol	38	4	10.53%
tolbutamide	23	1	4.35%

Medication changed: 47011 encounters; early-readmission rate 11.82%.

Medication unchanged: 54755 encounters; early-readmission rate 10.59%.

Precautions / care considerations

- Use model predictions as decision-support only; do not treat them as a diagnosis or treatment prescription.
- Confirm medication reconciliation and adherence at discharge.
- Arrange timely follow-up for patients with prior utilization or high predicted risk.
- Review glucose/A1C information and comorbidity burden with qualified clinicians.
- Investigate clinically relevant warning signs promptly and follow local hospital protocols.
- The dataset is retrospective; observed associations do not establish that a medication caused better or worse outcomes.
